

### Reading assignment:

### Question:

- If you create a constructor method to build a **DVD** by title then create a constructor method to build a **DVD** by category. Does JAVA allow you to do this?

### Answer:

- In Java, in order to overload constructors, each one needs a different **signature**. If you create two constructors that have the same number and type of parameters (in this case is **String**), Java will not be able to differentiate these two constructors and lead to an error.
